MIT 18.01SC Single Variable Calculus

Table of Contents

1. Unit 1: Differentiation 5

1.1. Part A: Definition and Basic Rules 5
Session 1: Introduction to Derivatives 5
Session 2: Examples of Derivatives 5
Session 3: Derivative as Rate of Change 5
Session 4: Limits and Continuity 5
Session 5: Discontinuity 5
Session 6: Calculating Derivatives 5
Session 7: Derivatives of Sine and Cosine 6
Session 8: Limits of Sine and Cosine 6
Session 9: Product Rule 6
Session 10: Quotient Rule 6
Session 11: Chain Rule 6
Session 12: Higher Derivatives 6
1.2. Part B: Implicit Differentiation and Inverse Functions 7
Session 13: Implicit Differentiation 7
Session 14: Examples of Implicit Differentiation 7
Session 15: Implicit Differentiation and Inverse Functions 7
Session 16: The Derivative of a^x 7
Session 17: The Exponential Function, its Derivative, and its Inverse 7
Session 18: Derivatives of other Exponential Functions 7
Session 19: An Interesting Limit Involving e 8
Session 20: Hyperbolic Trig Functions 8
1.3. Exam 1 8
Session 21: Review for Exam 1 8
Session 22: Materials for Exam 1 8

2. Unit 2: Applications of Differentiation 9

2.1. Part A: Approximation and Curve Sketching 9
Session 23: Linear Approximation 9
Session 24: Examples of Linear Approximation 9
Session 25: Introduction to Quadratic Approximation 9
Session 26: Using Quadratic Approximations 9
Session 27: Sketching Graphs I - Polynomials and Rational Functions 9
Session 28: Sketching Graphs II - General Strategies 9
2.2. Part B: Optimization, Related Rates and Newton's Method 10

Session 29: Optimization Problems 10
Session 30: Optimization Problems II 10
Session 31: Related Rates 10
Session 32: Ring on a String 10
Session 33: Newtons Method 10
2.3. Part C: Mean Value Theorem, Antiderivatives and Differential Equations 11
Session 34: Introduction to the Mean Value Theorem 11
Session 35: Using the Mean Value Theorem 11
Session 36: Differentials 11
Session 37: Antiderivatives 11
Session 38: Integration by Substitution 11
Session 39: Introduction to Differential Equations 11
Session 40: Separation of Variables 12
2.4. Exam 2 12
Session 41: Review for Exam 2 12
Session 42: Materials for Exam 2 12
3. Unit 3: The Definite Integral and its Applications 13
3.1. Part A: Definition of the Definite Integral and First Fundamental Theorem 13
Session 43: Definite Integrals 13
Session 44: Adding Areas of Rectangles 13
Session 45: Some Easy Integrals 13
Session 46: Riemann Sums 13
Session 47: Introduction of the Fundamental Theorem of Calculus 13
Session 48: The Fundamental Theorem of Calculus 13
Session 49: Applications of the Fundamental Theorem of Calculus 14
Session 50: Combining the Fundamental Theorem and the Mean Value Theorem 14
3.2. Part B: Second Fundamental Theorem, Areas, Volumes 14
Session 51: The Second Fundamental Theorem of Calculus 14
Session 52: Proving the Fundamental Theorem of Calculus 14
Session 53: New Functions From Old 14
Session 54: The Second Fundamental Theorem and ln(x) 15
Session 55: Creating New Functions Using the Second Fundamental Theorem 15
Session 56: Geometric Interpretation of Definite Integrals 15
Session 57: How to Calculate Volumes 15
Session 58: Volume of a Sphere Revolving About x-axis 15

Session 59: Volume of a Paraboloid Revolving About y-axis . . . 15
3.3. Part C: Average Value, Probability and Numerical Integration . . . 16
Session 60: Integrals and Averages . . . 16
Session 61: Integrals and Weighted Averages . . . 16
Session 62: Integrals and Probability . . . 16
Session 63: Numerical Integration . . . 16
Session 64: Numerical Integration Continued . . . 16
Session 65: Bell Curve Conclusion . . . 16
3.4. Exam 3 . . . 17
Session 66: Review for Exam 3 . . . 17
Session 67: Materials for Exam 3 . . . 17

4. Unit 4: Techniques of Integration . . . 18
4.1. Part A: Trigonometric Powers, Trigonometric Substitution and Completing the Square . . . 18
Session 68: Integral of sin cos Odd Exponents . . . 18
Session 69: Integral of sin cos Even Exponents . . . 18
Session 70: Preview of Trig Substitution and Polar Coordinates . . . 18
Session 71: Integrals Involving secant cosecant and cotangent . . . 18
Session 72: Trig Substitution . . . 18
Session 73: Completing the Square . . . 18
4.2. Part B: Partial Fractions, Integration by Parts, Arc Length, and Surface Area . . . 19
Session 74: Integration by Partial Fractions . . . 19
Session 75: Advanced Partial Fractions . . . 19
Session 76: Integration by Parts . . . 19
Session 77: Volume of a Wine Glass . . . 19
Session 78: Computing the Length of a Curve . . . 19
Session 79: Surface Area . . . 20
4.3. Part C: Parametric Equations and Polar Coordinates . . . 20
Session 80: Parametric Curves . . . 20
Session 81: Examples Using Parametrized Curves . . . 20
Session 82: Polar Coordinates . . . 20
Session 83: Polar Coordinates Continued . . . 20
Session 84: Polar Coordinates and Graphing . . . 20
4.4. Exam 4 . . . 21
Session 85: Review for Exam 4 . . . 21
Session 86: Materials for Exam 4 . . . 21

5. Unit 5: Exploring the Infinite . . . 22
5.1. Part A: L'Hospital's Rule and Improper Integrals . . . 22

Session 87: LHospitals Rule 22
Session 88: Examples of LHospitals Rule 22
Session 89: LHospitals Rule and Rates of Growth 22
Session 90: Advanced Examples of LHospitals Rule 22
Session 91: Improper Integrals 22
Session 92: Integral Comparison 22
Session 93: Indefinite Integrals and Singularities 23
5.2. Part B: Taylor Series 23
Session 94: Infinite Series 23
Session 95: Series Comparison 23
Session 96: Stacking Blocks 23
Session 97: Power Series 23
Session 98: Taylors Series 23
Session 99: Taylors Series Continued 24
Session 100: Operations on Power Series 24
Session 101: Conclusion 24

6. Final Exam Review 25
6.1. Key Concepts from All Units 25
6.2. Practice Problems 25

1. Unit 1: Differentiation

1.1. Part A: Definition and Basic Rules

Session 1: Introduction to Derivatives

Lecture Notes

Worked Examples

Questions

Session 2: Examples of Derivatives

Lecture Notes

Worked Examples

Questions

Session 3: Derivative as Rate of Change

Lecture Notes

Worked Examples

Questions

Session 4: Limits and Continuity

Lecture Notes

Worked Examples

Questions

Session 5: Discontinuity

Lecture Notes

Worked Examples

Questions

Session 6: Calculating Derivatives

Lecture Notes

Worked Examples

Questions

Session 7: Derivatives of Sine and Cosine

Lecture Notes

Worked Examples

Questions

Session 8: Limits of Sine and Cosine

Lecture Notes

Worked Examples

Questions

Session 9: Product Rule

Lecture Notes

Worked Examples

Questions

Session 10: Quotient Rule

Lecture Notes

Worked Examples

Questions

Session 11: Chain Rule

Lecture Notes

Worked Examples

Questions

Session 12: Higher Derivatives

Lecture Notes

Worked Examples

Questions

1.1.1. Problem Set 1

1.2. Part B: Implicit Differentiation and Inverse Functions

Session 13: Implicit Differentiation

Lecture Notes

Worked Examples

Questions

Session 14: Examples of Implicit Differentiation

Lecture Notes

Worked Examples

Questions

Session 15: Implicit Differentiation and Inverse Functions

Lecture Notes

Worked Examples

Questions

Session 16: The Derivative of a^x

Lecture Notes

Worked Examples

Questions

Session 17: The Exponential Function, its Derivative, and its Inverse

Lecture Notes

Worked Examples

Questions

Session 18: Derivatives of other Exponential Functions

Lecture Notes

Worked Examples

Questions

Session 19: An Interesting Limit Involving e

Lecture Notes

Worked Examples

Questions

Session 20: Hyperbolic Trig Functions

Lecture Notes

Worked Examples

Questions

1.2.1. Problem Set 2

1.3. Exam 1

Session 21: Review for Exam 1

Review Notes

Key Concepts

Session 22: Materials for Exam 1

Exam Notes

2. Unit 2: Applications of Differentiation

2.1. Part A: Approximation and Curve Sketching

Session 23: Linear Approximation

Lecture Notes

Worked Examples

Questions

Session 24: Examples of Linear Approximation

Lecture Notes

Worked Examples

Questions

Session 25: Introduction to Quadratic Approximation

Lecture Notes

Worked Examples

Questions

Session 26: Using Quadratic Approximations

Lecture Notes

Worked Examples

Questions

Session 27: Sketching Graphs I - Polynomials and Rational Functions

Lecture Notes

Worked Examples

Questions

Session 28: Sketching Graphs II - General Strategies

Lecture Notes

Worked Examples

Questions

2.1.1. Problem Set 3

2.2. Part B: Optimization, Related Rates and Newton's Method

Session 29: Optimization Problems

Lecture Notes

Worked Examples

Questions

Session 30: Optimization Problems II

Lecture Notes

Worked Examples

Questions

Session 31: Related Rates

Lecture Notes

Worked Examples

Questions

Session 32: Ring on a String

Lecture Notes

Worked Examples

Questions

Session 33: Newtons Method

Lecture Notes

Worked Examples

Questions

2.2.1. Problem Set 4

2.3. Part C: Mean Value Theorem, Antiderivatives and Differential Equations

Session 34: Introduction to the Mean Value Theorem

Lecture Notes

Worked Examples

Questions

Session 35: Using the Mean Value Theorem

Lecture Notes

Worked Examples

Questions

Session 36: Differentials

Lecture Notes

Worked Examples

Questions

Session 37: Antiderivatives

Lecture Notes

Worked Examples

Questions

Session 38: Integration by Substitution

Lecture Notes

Worked Examples

Questions

Session 39: Introduction to Differential Equations

Lecture Notes

Worked Examples

Questions

Session 40: Separation of Variables

Lecture Notes

Worked Examples

Questions

2.3.1. Problem Set 5

2.4. Exam 2

Session 41: Review for Exam 2

Review Notes

Key Concepts

Session 42: Materials for Exam 2

Exam Notes

3. Unit 3: The Definite Integral and its Applications

3.1. Part A: Definition of the Definite Integral and First Fundamental Theorem

Session 43: Definite Integrals

Lecture Notes

Worked Examples

Questions

Session 44: Adding Areas of Rectangles

Lecture Notes

Worked Examples

Questions

Session 45: Some Easy Integrals

Lecture Notes

Worked Examples

Questions

Session 46: Riemann Sums

Lecture Notes

Worked Examples

Questions

Session 47: Introduction of the Fundamental Theorem of Calculus

Lecture Notes

Worked Examples

Questions

Session 48: The Fundamental Theorem of Calculus

Lecture Notes

Worked Examples

Questions

Session 49: Applications of the Fundamental Theorem of Calculus

Lecture Notes

Worked Examples

Questions

Session 50: Combining the Fundamental Theorem and the Mean Value Theorem

Lecture Notes

Worked Examples

Questions

3.1.1. Problem Set 6

3.2. Part B: Second Fundamental Theorem, Areas, Volumes

Session 51: The Second Fundamental Theorem of Calculus

Lecture Notes

Worked Examples

Questions

Session 52: Proving the Fundamental Theorem of Calculus

Lecture Notes

Worked Examples

Questions

Session 53: New Functions From Old

Lecture Notes

Worked Examples

Questions

Session 54: The Second Fundamental Theorem and ln(x)

Lecture Notes

Worked Examples

Questions

Session 55: Creating New Functions Using the Second Fundamental Theorem

Lecture Notes

Worked Examples

Questions

Session 56: Geometric Interpretation of Definite Integrals

Lecture Notes

Worked Examples

Questions

Session 57: How to Calculate Volumes

Lecture Notes

Worked Examples

Questions

Session 58: Volume of a Sphere Revolving About x-axis

Lecture Notes

Worked Examples

Questions

Session 59: Volume of a Paraboloid Revolving About y-axis

Lecture Notes

Worked Examples

Questions

3.2.1. Problem Set 7

3.3. Part C: Average Value, Probability and Numerical Integration

Session 60: Integrals and Averages

Lecture Notes

Worked Examples

Questions

Session 61: Integrals and Weighted Averages

Lecture Notes

Worked Examples

Questions

Session 62: Integrals and Probability

Lecture Notes

Worked Examples

Questions

Session 63: Numerical Integration

Lecture Notes

Worked Examples

Questions

Session 64: Numerical Integration Continued

Lecture Notes

Worked Examples

Questions

Session 65: Bell Curve Conclusion

Lecture Notes

Worked Examples

Questions

3.3.1. Problem Set 8

3.4. Exam 3

Session 66: Review for Exam 3

Review Notes

Key Concepts

Session 67: Materials for Exam 3

Exam Notes

4. Unit 4: Techniques of Integration

4.1. Part A: Trigonometric Powers, Trigonometric Substitution and Completing the Square

Session 68: Integral of sin cos Odd Exponents

Lecture Notes

Worked Examples

Questions

Session 69: Integral of sin cos Even Exponents

Lecture Notes

Worked Examples

Questions

Session 70: Preview of Trig Substitution and Polar Coordinates

Lecture Notes

Worked Examples

Questions

Session 71: Integrals Involving secant cosecant and cotangent

Lecture Notes

Worked Examples

Questions

Session 72: Trig Substitution

Lecture Notes

Worked Examples

Questions

Session 73: Completing the Square

Lecture Notes

Worked Examples

Questions

4.1.1. Problem Set 9

4.2. Part B: Partial Fractions, Integration by Parts, Arc Length, and Surface Area

Session 74: Integration by Partial Fractions

Lecture Notes

Worked Examples

Questions

Session 75: Advanced Partial Fractions

Lecture Notes

Worked Examples

Questions

Session 76: Integration by Parts

Lecture Notes

Worked Examples

Questions

Session 77: Volume of a Wine Glass

Lecture Notes

Worked Examples

Questions

Session 78: Computing the Length of a Curve

Lecture Notes

Worked Examples

Questions

Session 79: Surface Area

Lecture Notes

Worked Examples

Questions

4.2.1. Problem Set 10

4.3. Part C: Parametric Equations and Polar Coordinates

Session 80: Parametric Curves

Lecture Notes

Worked Examples

Questions

Session 81: Examples Using Parametrized Curves

Lecture Notes

Worked Examples

Questions

Session 82: Polar Coordinates

Lecture Notes

Worked Examples

Questions

Session 83: Polar Coordinates Continued

Lecture Notes

Worked Examples

Questions

Session 84: Polar Coordinates and Graphing

Lecture Notes

Worked Examples

Questions

4.3.1. Problem Set 11

4.4. Exam 4

Session 85: Review for Exam 4

Review Notes

Key Concepts

Session 86: Materials for Exam 4

Exam Notes

5. Unit 5: Exploring the Infinite

5.1. Part A: L'Hospital's Rule and Improper Integrals

Session 87: LHospitals Rule

Lecture Notes

Worked Examples

Questions

Session 88: Examples of LHospitals Rule

Lecture Notes

Worked Examples

Questions

Session 89: LHospitals Rule and Rates of Growth

Lecture Notes

Worked Examples

Questions

Session 90: Advanced Examples of LHospitals Rule

Lecture Notes

Worked Examples

Questions

Session 91: Improper Integrals

Lecture Notes

Worked Examples

Questions

Session 92: Integral Comparison

Lecture Notes

Worked Examples

Questions

Session 93: Indefinite Integrals and Singularities

Lecture Notes

Worked Examples

Questions

5.2. Part B: Taylor Series

Session 94: Infinite Series

Lecture Notes

Worked Examples

Questions

Session 95: Series Comparison

Lecture Notes

Worked Examples

Questions

Session 96: Stacking Blocks

Lecture Notes

Worked Examples

Questions

Session 97: Power Series

Lecture Notes

Worked Examples

Questions

Session 98: Taylors Series

Lecture Notes

Worked Examples

Questions

Session 99: Taylors Series Continued

Lecture Notes

Worked Examples

Questions

Session 100: Operations on Power Series

Lecture Notes

Worked Examples

Questions

Session 101: Conclusion

Lecture Notes

Worked Examples

Questions

6. Final Exam Review

6.1. Key Concepts from All Units

6.2. Practice Problems
